

Metropolitan Council Highway Transitway Corridor Study Update

May 9, 2013

US Hwy 169 Corridor Coalition

Transportation Policy Plan (2008-2010)

- Transitway modes on highways:
 - Highway bus rapid transit (BRT)
 - Express bus corridors with Transit Advantages
- Possible synergy between highway and transit investments

Implementation Experience (Ongoing)

- Highway transit advantages:
 - Bus-only shoulders
 - Managed lanes
- Regional experience:
 - I-35 W South BRT
 - Cedar BRT

Project Purpose

- 8 corridors for concept plan development

TH 212

TH 65

TH 169

TH 36

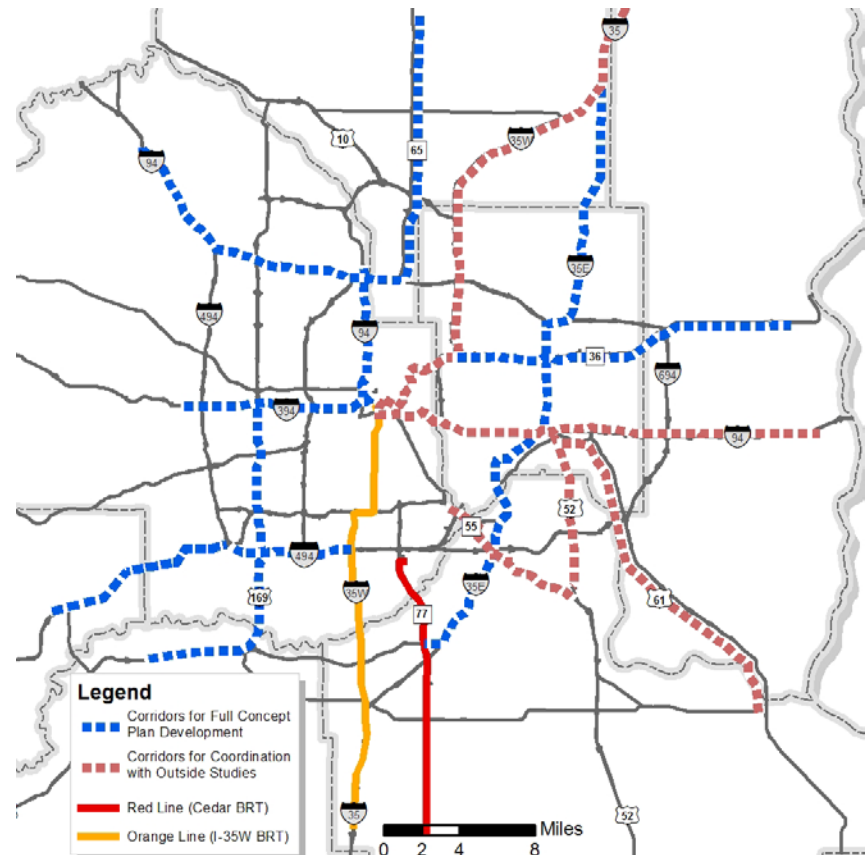

I-394

I-35 E North

I-94 West

I-35 E South

- Additional corridors already under study will coordinate with this study

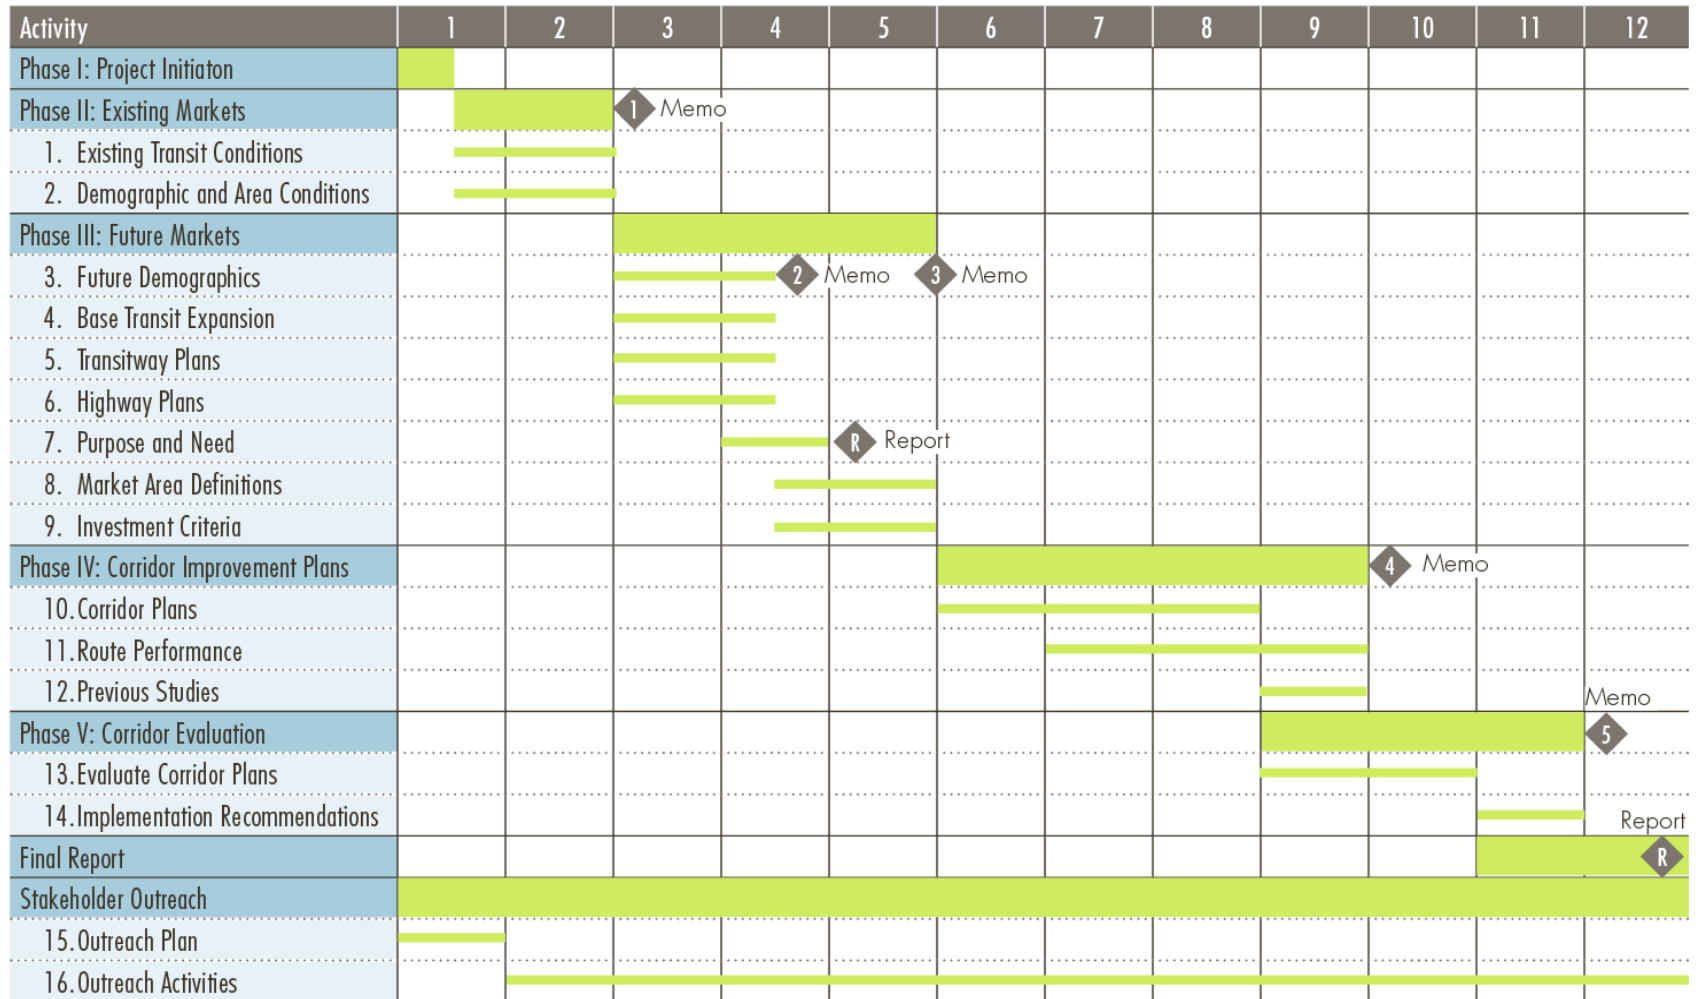

Project Purpose

- Determine transit demand for all-day, BRT-like service
 - *Conceptual routes*
 - *Conceptual station locations*
- Better understand highway BRT demand in the multiple regional corridors and the range of costs and benefits
- Include analysis in future transit and highway studies

Project Phases

- Phase 3: Future markets and conditions
 - Planned demographics (existing forecasts)
 - Planned land use (existing comp. plans)
 - Planned transportation improvements
 - Transit plans
 - Highway plans (coordination with MnDOT and local communities)
 - Define market areas

Schedule

 Deliverable

Existing Conditions Update

- Demographics
- Employment
- Transit infrastructure
- Existing transit routes and performance
- Corridor roadway conditions including traffic volumes and congestion

What type of information is used?

- Population- 2010* and 2030**
- Population density (persons per acre)
- Employment- 2010 and 2030
- Employment density (employees per acre)

* 2010 Census and Quarterly Census of Employment and Wages (QCEW)

** Local comprehensive plans

Other Factors Considered

- Worker commute origin-destination patterns
- Opportunities to connect with other transitways
- Physical barriers near interchanges

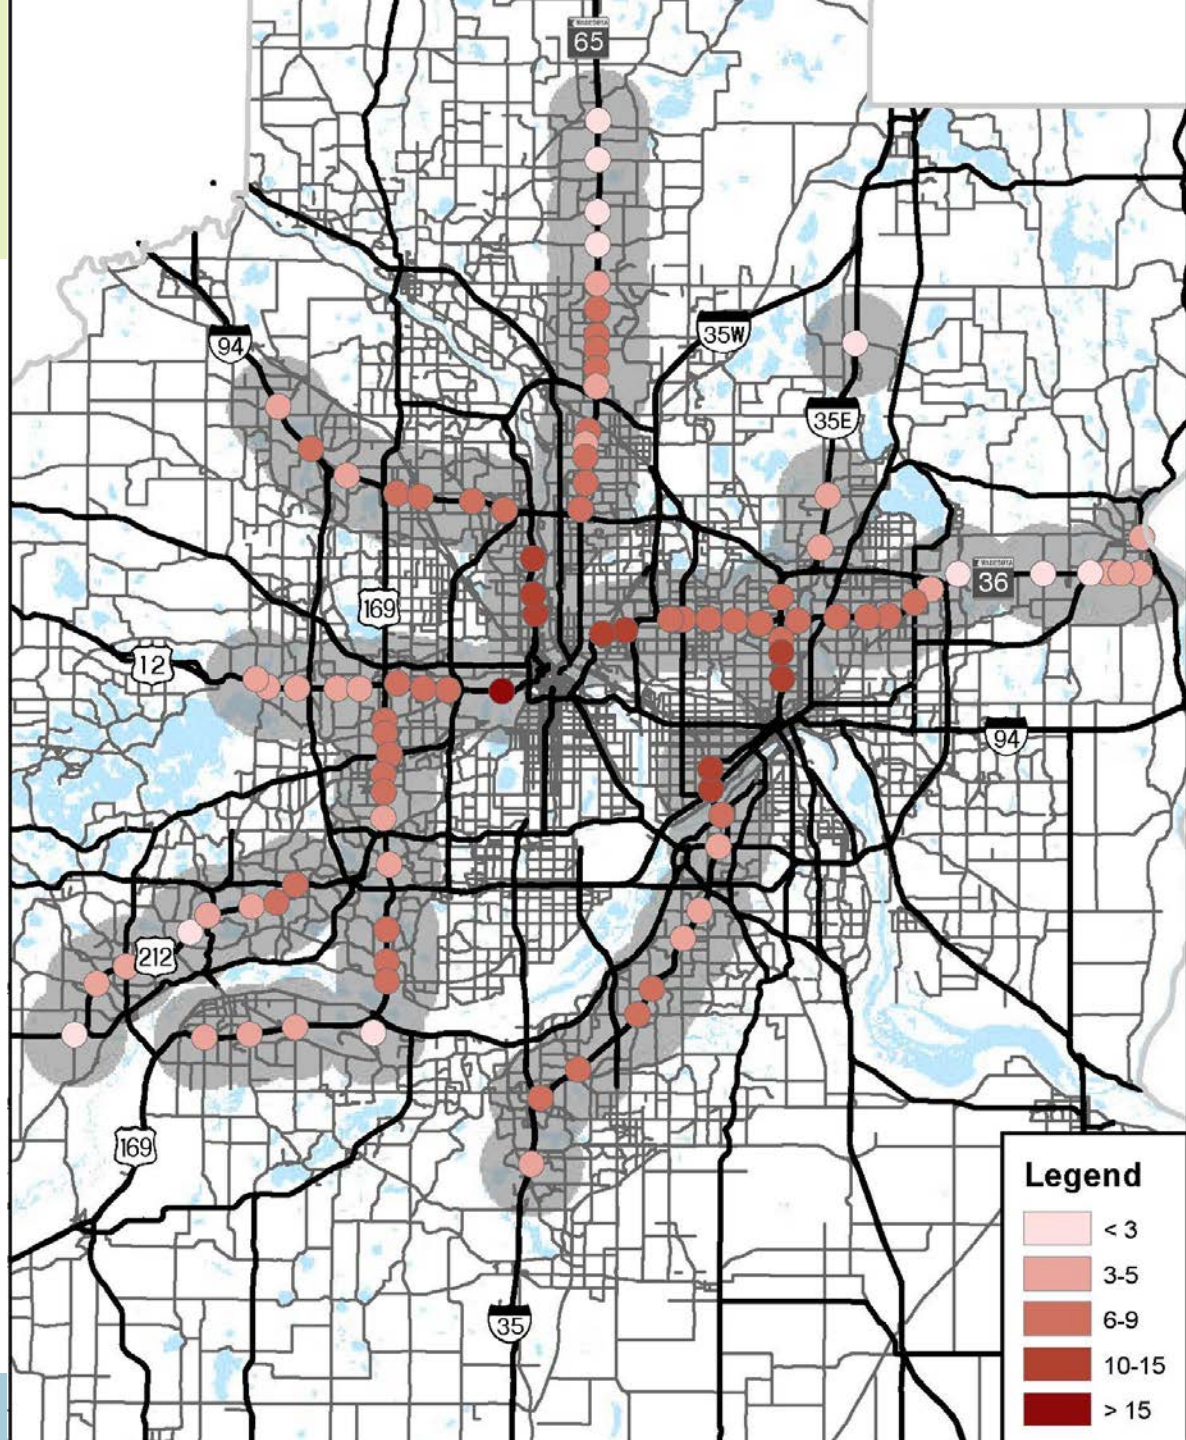

Transit Market Analysis

- Two-mile buffer around existing interchanges
- Residential density excludes water and parklands
- Employment density based on commercial/industrial/institutional/mixed-use land
- Breakpoints based on Transit Redesign (Metro Transit)

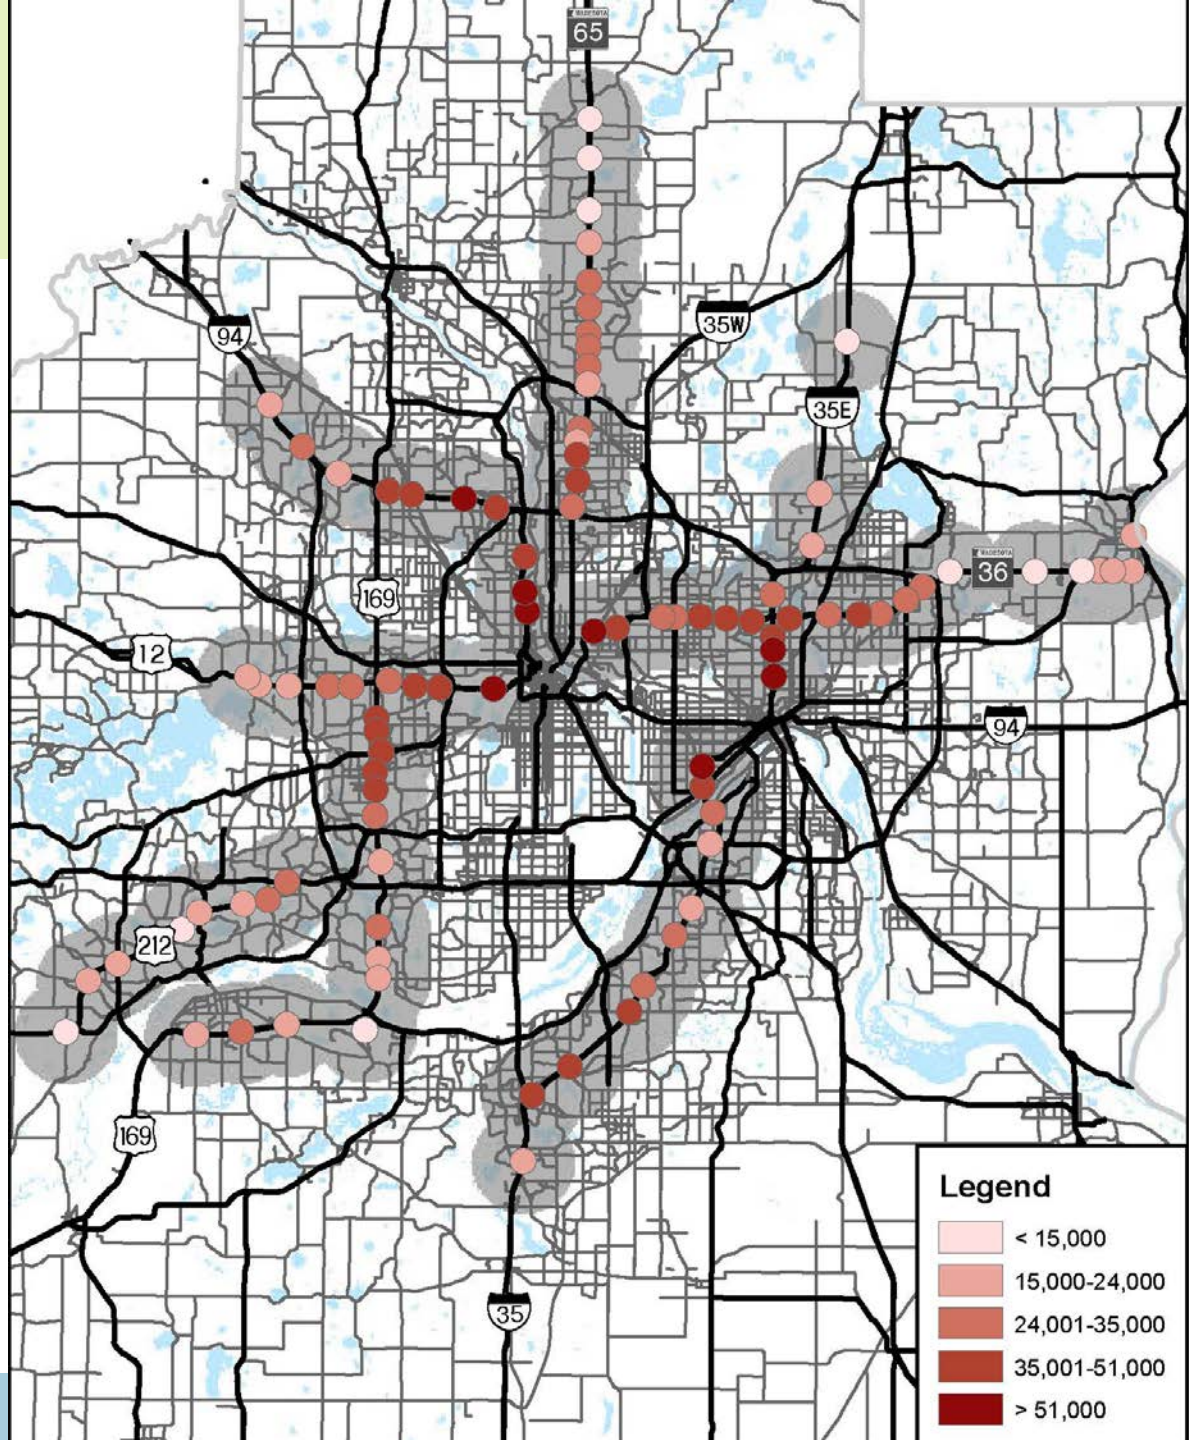

2010

Population
Density

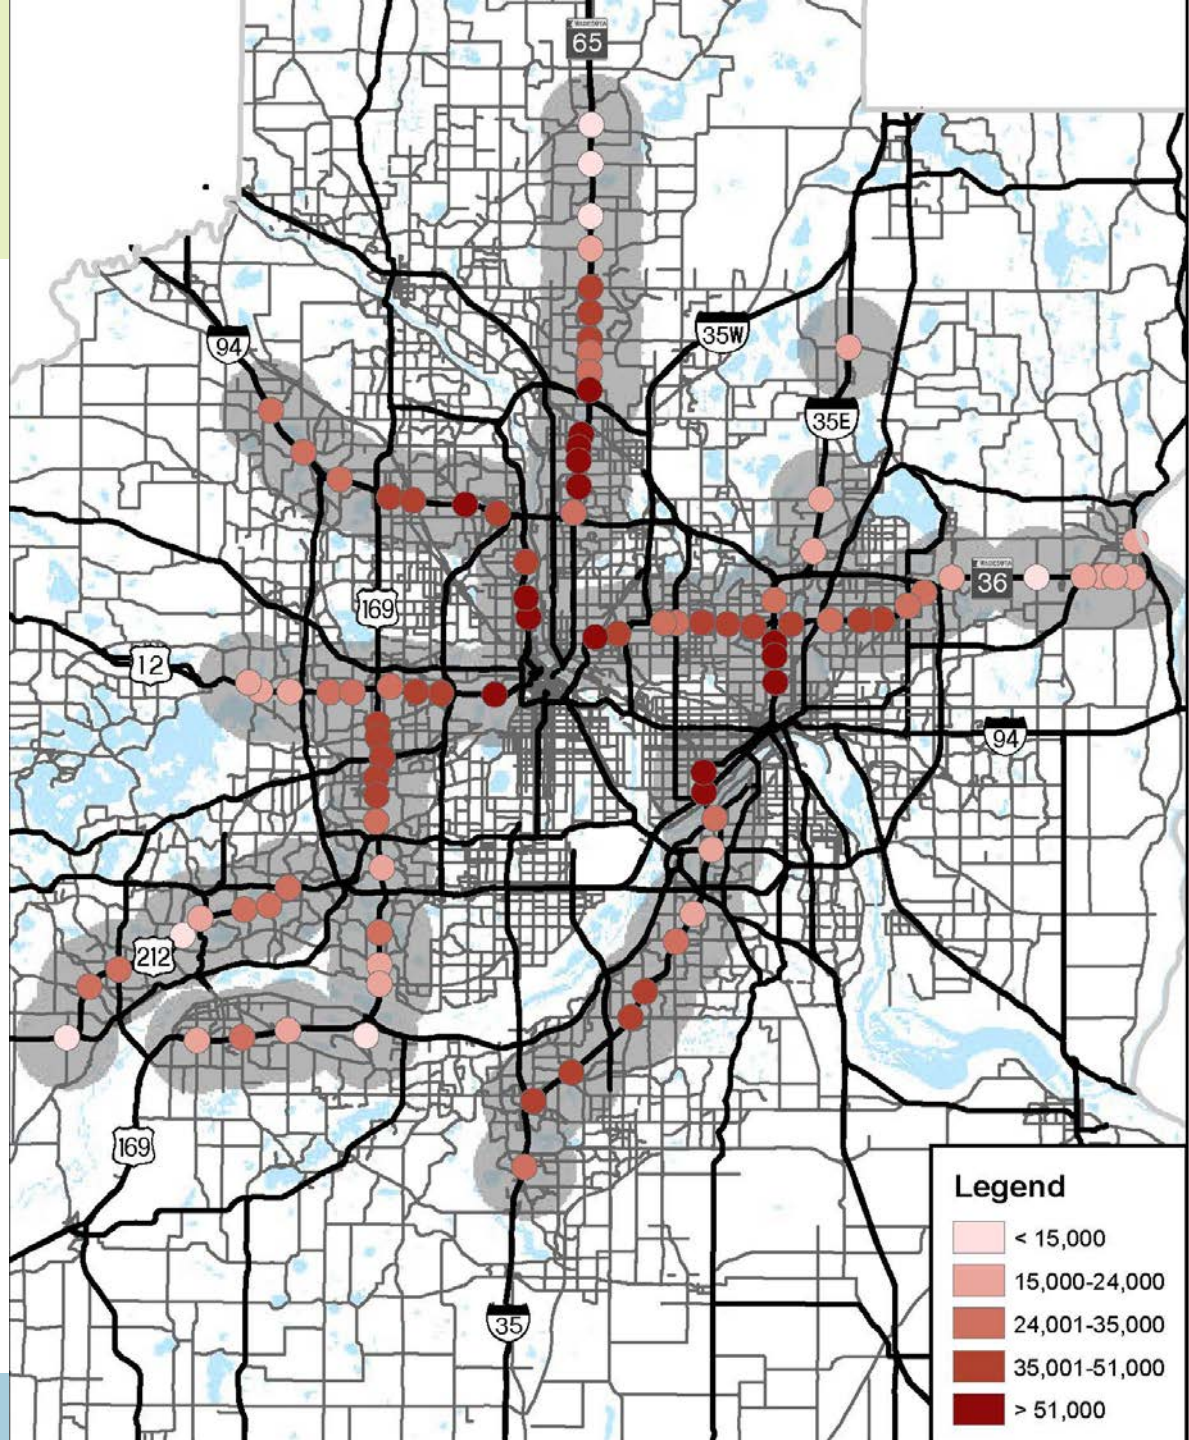

(Persons per
Acre)

2010 Population

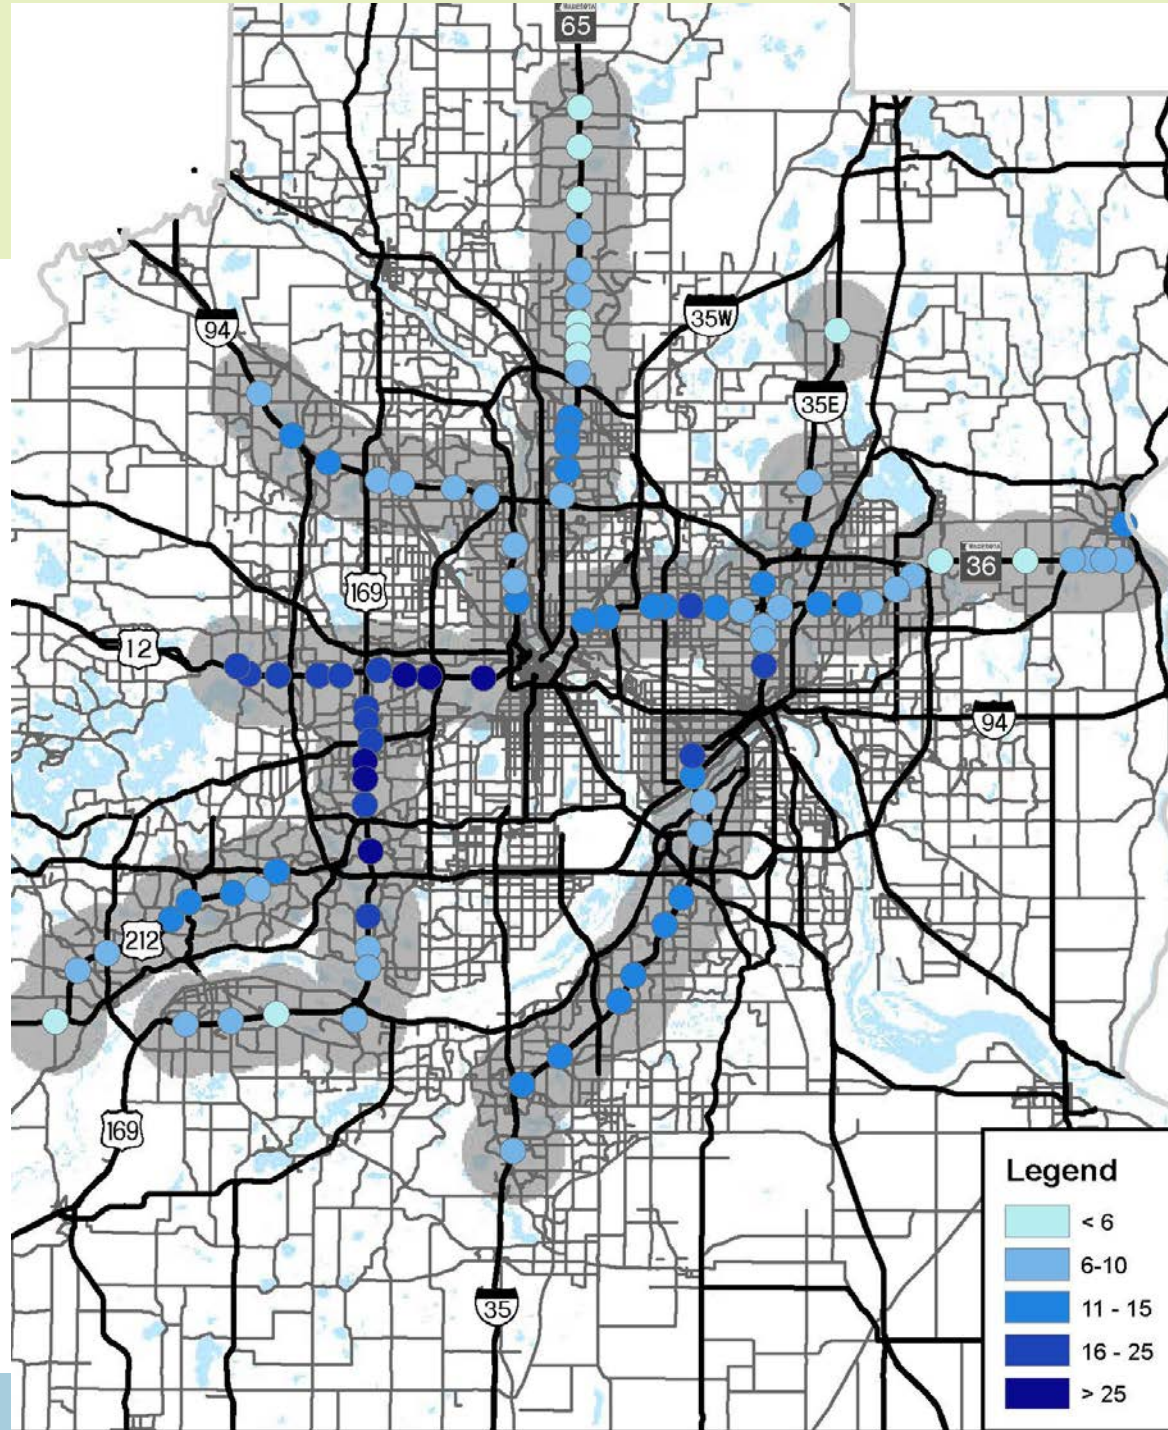

2030 Population

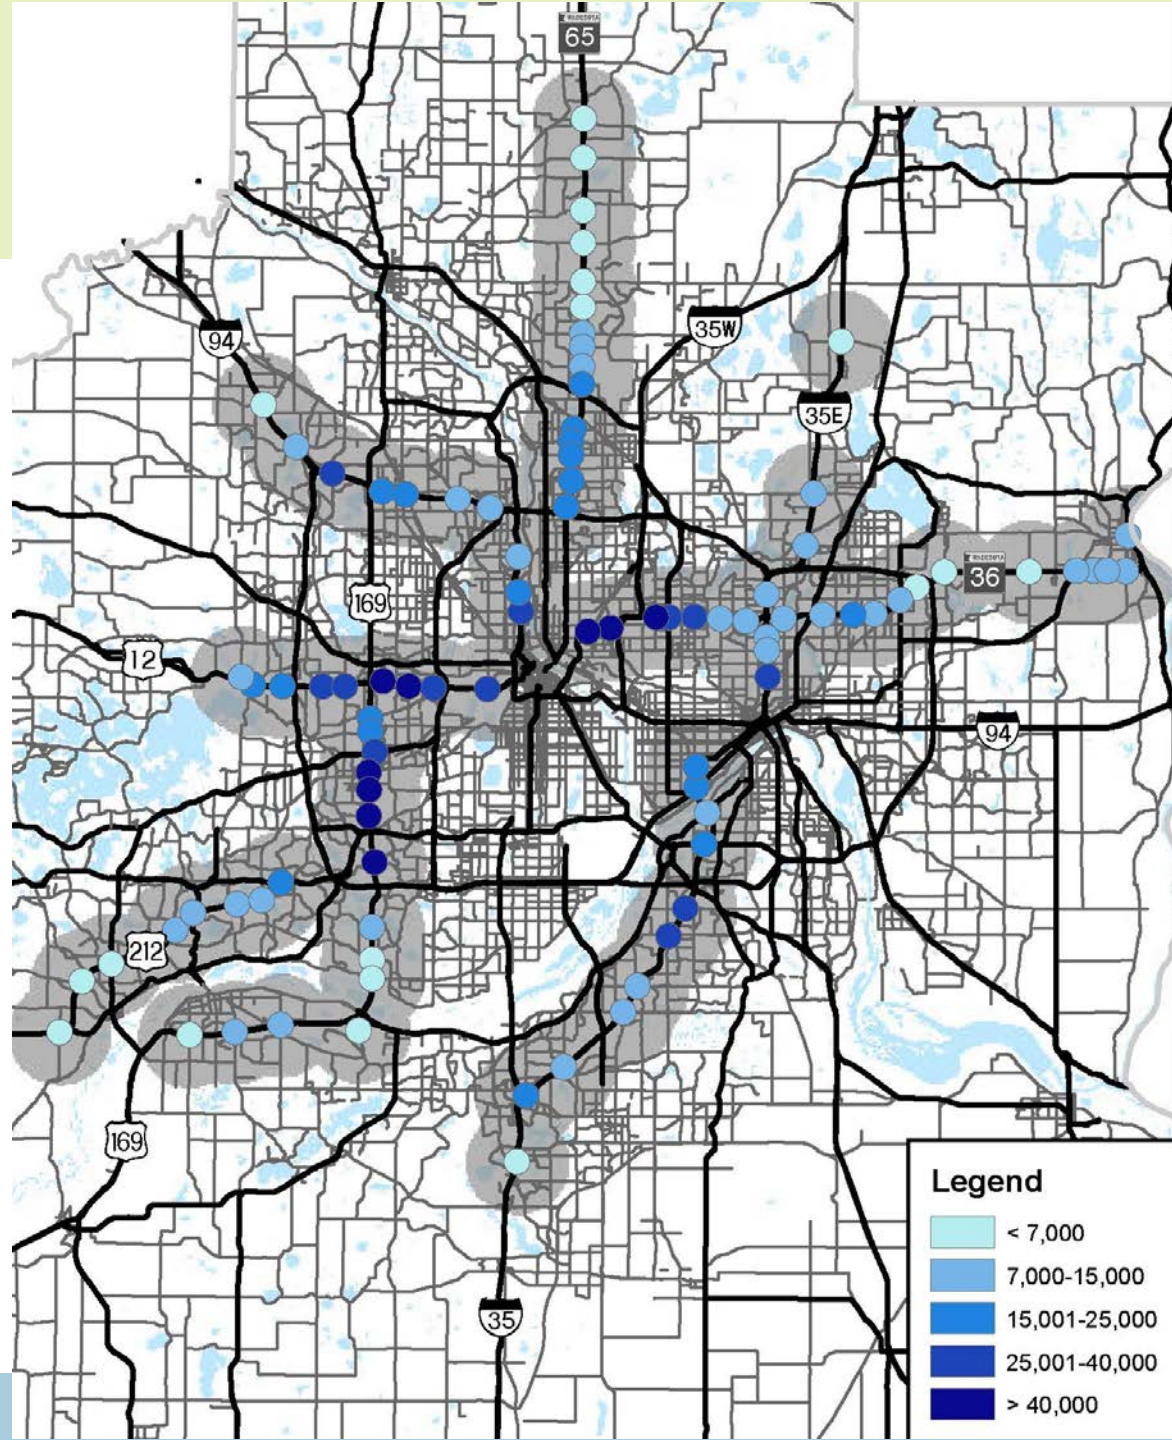

2010 Employment Density

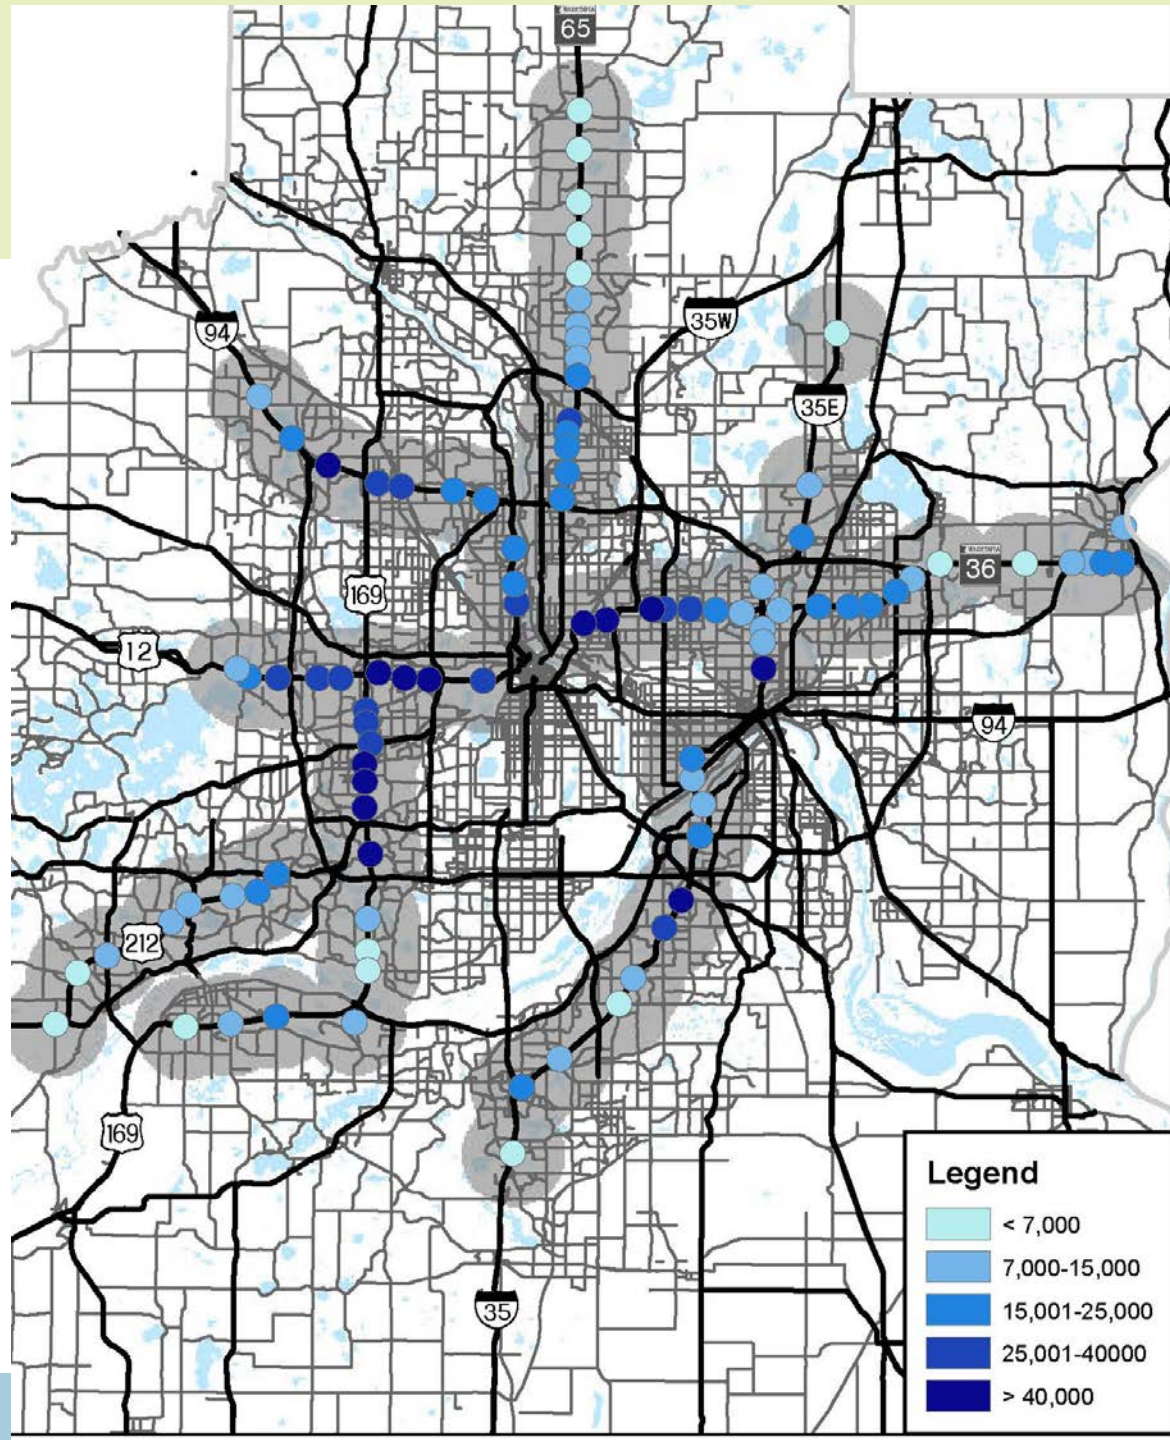

(Employees
per Acre)

2010 Employment

2030 Employment

Next Step for Transit Market Analysis

- Look at other factors in addition to population and employment
- Make recommendations on corridor segments
- Identify general station locations

Upcoming Stakeholder Workshop

- End of June 2013
- Half day workshop with elected officials and staff of communities along proposed corridors
- Interactive opportunity to participate in regional transit planning
