

BLUFF DRIVE OVERPASS OR INTERCHANGE

ALIGNMENT STUDY NEEDED TO DETERMINE SITE LOCATION

The intersection of US-169 and Bluff Drive currently serves rural residential and industrial property in Scott County. The future land use in this area is expected to be urban density beyond 2030 with the planned construction of a new wastewater treatment plant by the Metropolitan Council. High densities will drive the need for an overpass or interchange.

Two concepts were developed in 2001-02 for Bluff Drive as a part of the *Interregional Corridor Study*: an overpass and a folded diamond interchange. The concepts were driven by a pending amphitheater proposal which has ceased to be a driving force behind the project.

In the recent updates of the *Scott County 2030 Comprehensive Plan* and the *City of Jordan 2030 Comprehensive Plan*, the 173rd Street area is identified as a potential location for the future interchange, rather than the Bluff Drive location.

Further study is needed to resolve the location of this interchange which will serve the future development area.

COMMUNITY BENEFITS

Construction of an overpass or interchange would:

- Support the mobility of the US-169 Corridor.
- Allow for development and right-of-way preservation to occur with a clearly identified plan in place.
- Improve safety on the corridor by removing at-grade intersections.

FUNDING

An alignment study and interchange concept development to lead to a layout and preliminary design for right-of-way preservation is needed.

Estimated study cost: \$550,000.
